Materials

We put a strong focus on using natural and sustainable materials when possible. Knowing where our raw materials come from not only helps us to be eco-conscious, but allows us to connect with each piece on a deeper level.

Lumber

We source all of our lumber from FCS certified mills that use sustainable forestry techniques to ensure the health of forests through natural regeneration.

White Oak is a dense hardwood found throughout the Northeast that has excellent durability with mostly straight prominent grain and subtle figuring. The color ranges from a pale tan to a light brown ideal for a clean bright look.

Ebonized Oak is created using a dye to turn Red Oak lumber into a deep, rich black. It boasts similar strength and durability to White Oak, with a slightly more pronounced grain structure.

Walnut is a medium density hardwood Native to the Northeast. It is highly sought after for its naturally dark heartwood that adds depth and warmth to any space.

White Ash is a strong and durable hardwood with an open grain structure similar to Oak. The color ranges from a creamy white to a pale blonde, and brings a clean and airy lightness to any design.

Finishes

We use finishes that are derived from natural materials and contain low or no VOCs. These finishes are safe for children, pet & plants, and are suitable for high traffic areas.

Osmo Polyx

Osmo Polyx Oil is stain-resistant, water repellant and abrasion resistant, and results in a surface that is pleasant to the touch. Based on natural plant oils and waxes, Osmo Polyx leaves a protective coating that brings each piece to life.

Safe for Humans, Plants & Animals: DIN 53160
Safe for Children's Toys: Euro Norm EN 71.3

Rubio Monocoat

Rubio Monocoat is a plant- based hard wax oil finish that colors and protects with one layer. Using advanced molecular bonding, it provides durable protection that keeps the wood's natural look and feel

Adhesion DIN EN ISO 2409

Leather

Our leathers are sourced from both domestic and international tanneries with the highest standards of quality and sustainability in mind.

Upholstery

Our upholstery leather used for dining chairs and stools comes from European cattle that are raised closed to the tanneries to reduce the amount of water used in production. These tanneries employ an eco friendly tanning process to ensure they meet environmental standards of ISO 14001 and OEKO-TEX.
